Art Unit: 2153

1. Claims 1-19 are pending for examination.

2. The non-statutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper time-wise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a non-statutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-19 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being un-patentable over claims 1-21 of co-pending Application No.10/007,064. Although the conflicting claims are not identical, they are not patentably distinct from each other because the difference in scope is not substantial enough. For example, the present application calls for a method for managing content displayed on an information management unit and the feature of displaying information related to the first and second inputs and to switch between a first synchronized datastream input and a second unsynchronized datastream input while the co-pending application calls a method for enabling coordinated (e.g., managing of the present application) session of a television program (e.g., content displayed on the information management unit of the present application) related to the first and second interconnection networks (e.g., the first and second inputs of the present application) and to switch between a first synchronized datastream input and a second unsynchronized datastream input.

Art Unit: 2153

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

4. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefore, subject to the conditions and requirements of this title.

5. Claims 10-18 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter as being an intangible media (e.g., program signal) and an abstract idea. Program signals are incapable of being touched or perceived absent the tangible medium through which they are conveyed. Moreover, a medium containing machine-readable code would normally be considered statutory subject matter. However, the code to provide program signals is not tangibly embodied in a manner so as to be executable as the only hardware is in an intended use statement. Since it is the intent of the execution of a medium and not the medium itself that includes such hardware, thus this claim is not tangible.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The references are cited in the Form PTO-892 for the applicant's review.

A shortened statutory period for response to this action is set to expire 3 (three) months and 0 (zero) days from the mail date of this letter. Failure to respond within the period for response will result in **ABANDONMENT** of the application (see 35 U.S.C 133, M.P.E.P 710.02, 710.02(b)).
